Receipt

This
Does not
include the
3 inch pipe
for the body.

1 3in Y
3 3in caps
3 1 1/2" threaded unions
2 pieces of 3" pvc cut @ 3"
1 piece cut at 8"
1 screen cut to fit around the outside of both unions
and the length between the two end caps (inside)
Cut a 1 1/2 in hole in the 3 caps
Install 3 threaded unions to the caps (I put some duct seal to help seal
on both sides)
Install the 2 -3" cut pieces of 3" to the 2 bottom parts of the Y
Install the 8in to the longer part of the Y
you want to wrap the wire around the outside of the union before
putting the union onto the cap
This is easily done if you temporarily attach it to a piece of 1 1/2 pipe
and as you wire tie one end slide the union and the pipe thru the wire
and tie it as you go till you reach the far end ,then just slide the union
and pipe thru.
carefully put the long end on the cap,then run it thru the body and
attach the cap to the body,and attach the other end cap to the
body,being carefull that the wire is going over the union
attach the cap that is the bottom of the Y duct tape all connections and
you are on your way,I have the Kan_burn going into the freezer on a
45° angle..
